

ABSTRACT

The present invention concerns an electrical coupling bar
(1) including:

- 5 - an electrically insulating support (1a) exhibiting
 two parallel grooves (2),
- a metallic strip (3) engaged in each groove (2),
 the metallic strips (3) projecting out of the
 grooves and exhibiting interior faces (3a) opposite
10 one another, delimiting between them a free
 engagement space (4),
- and protecting means covering the other faces (3b,
 3c, 3d) of the metallic strips (3).
